

Innovative platform with modular architecture, scaling up to create integrated systems of any level of complexity, allowing organizations to streamline security and operations management, better manage information, improve intelligence and operational efficiency, enable remote management and enhance overall visibility.

- **Unified Operations**
- **Real-time Response**
- **Analytics & Analysis**

With its robust architecture and comprehensive integrations, **VANDiWare®** ecosystem empowers **SECURITY, COMMAND & CRISIS RESPONSE MANAGEMENT** by managing diverse physical security equipment with automatic decision making and reasoning methodologies, equipped with intelligent video, audio and business analytics. Being designed with deep experience and expertise, **VANDiWare®** caters to need for both the public and private sectors.

Being open-platform, Information gathered from brand-independent legacy physical systems and inputs from diverse command centers, are analysed in real-time to provide automated response management, customised to the ever-changing requirements from the ground.

Data Collection & Analysis : Visibility
Verification & Resolution : Compliance
Response & Reports : Efficiency

Designed with open architecture, **VANDiWare®** helps to seamlessly manage system parameters and defines automated response scenarios - saving time, cost and space enabling better scalability and complex integrations.

OPERATIONS, SECURITY & ANALYTICS

- **Operations, Command & Control**
- **Incident Management**
- **Situational Awareness**
- **Emergency Response**
- **Crisis Communication**
- **Disaster Management**
- **Remote Monitoring & Management**
- **Evidence Management**
